

A Letter to Public Health Officers

Posted on [September 13, 2021](#) by [admin](#)

Civil liberties are under attack in Canada and worldwide. On the basis of public health acts and infectious disease laws, limitations to constitutional rights are imposed through emergency orders by Canada's medical officers of health and by unelected bureaucrats elsewhere.

The Canadian Charter of Rights and Freedoms was written specifically to limit government overreach. In a crisis such as this, it is more important than ever to uphold Charter rights. Whether the COVID-19 mandates and restrictions represent reasonable and necessary limitations has yet to be seen.

Members of the newly formed group [Canadian Academics for Covid Ethics](#) and other independent scholars address these questions in a letter to our public health officials. The authors summarize the many uncertainties around the severity of the pandemic, reliance on problematic testing procedures and erratic modeling, ineffective non-pharmaceutical interventions, suppression of alternative treatments, disregard for natural immunity, and the destructive focus on vaccines as the only solution.

The Open Letter has been sent directly to the federal, provincial and Ontario regional Public Health Officers, to ensure that they receive it, and to politicians and the media.

Open Letter to Public Health Officers

After months of fear, misinformation, lockdowns, mandates, and broken trust, Canadians are starting to wake up in disbelief:

What have you done?!

You have convinced and continue to attempt convincing the public that we are in the midst of a major health crisis, and thrust our country into chaos. Meanwhile, all-cause mortality in Canada is in-line with trends from the past several years and indicates no such crisis. You have instilled fear in the general public of COVID-19 by publishing egregious data (such as daily cases and ICU numbers) without putting those numbers into context. How serious are those 'cases'? How many were asymptomatic? What would similar case numbers be in any past years for other illness such as the flu? How does ICU occupancy compare to previous years? You are misleading the public and priming us for unwarranted future restrictions.

What have you done?!

You have not been transparent about the favourable survival rates from COVID. Instead, you convinced us that a positive test result is a death sentence, when in reality the virus overwhelmingly affects elderly people

and those with specific vulnerabilities. COVID remains relatively harmless for the majority of the population.

What have you done?!

You have driven up case numbers by relying on the PCR test, deemed to be inappropriate as a diagnostic tool by its inventor and known to yield too many false positives at the cycle thresholds that have been used. In fact, the WHO recommended, on June 25 of this year, that ‘widespread screening of asymptomatic individuals is not a recommended strategy’. And yet, you insist on driving up the case numbers by mass testing of healthy, asymptomatic individuals. You have made Canadians irrationally fearful of one another, convincing us that asymptomatic transmission is a driver of infections, while multiple studies demonstrate that this is false. Yet, you fail to update the public on the changing science.

What have you done?!

You have coerced an entire population to wear masks, despite the fact that their ability to prevent transmission of COVID-19 has been seriously called into question by recent systematic reviews of the medical literature. This is also readily observed by comparing regions with and without mask mandates. Cloth masks and most mass-produced face masks are not approved medical devices, rather their real purpose appears to be the creation of heightened public anxiety, isolating the wearers, and posturing visual compliance to unfounded public health *diktats*. This insidious form of psychological control has immeasurable health, social and psychological consequences, especially for children, which you fail to acknowledge.

What have you done?!

You have utilized lockdowns as a sledgehammer to bring down COVID cases, while neglecting the resulting collateral damage from lost livelihoods, stalled cancer and transplant surgeries, and increased rates of depression, drug overdose, and suicide. You have failed to take a holistic approach, and your “cure” is proving far worse than the disease. There are multiple studies demonstrating the ineffectiveness of lockdowns, easily seen by simple comparison of jurisdictions that locked down with those that didn’t. You are failing us by failing to understand the evolution of knowledge. We learn by and through mistakes. The ethical principle is to own up to mistakes. Without that first step, ignorance flourishes.

What have you done?!

You have provided madcap computer model predictions to justify lockdowns, proclaiming the lockdowns as successful, when the predictions did not materialize. This is not proof. This is manipulation. Computer models have provided too many nonsensical predictions and should have been ignored. After decades of model refinement, we still cannot accurately predict the weather, even a day in advance. Yet, you present COVID model results as if they are accurate over the span of months.

What have you done?!

You have not provided any solid scientific evidence that any of the measures you have imposed on the public are either necessary or effective. You have ignored a body of scientific literature that does not support your measures, and you have not engaged with experts who have raised concerns or evaluated the same evidence in a way that does not align with your views. You have not allowed public scientific debate on these issues, choosing rather to ignore, censor or smear those brave enough to bring them to the public.

What have you done?!

You have ignored early treatment protocols for safe, effective, and inexpensive treatments of COVID 19 with multidrug therapies, despite the massive evidence both from front-line doctors and meta-analysis of the medical literature, with published studies showing their efficacy around the world. Instead, you have convinced citizens that COVID-19 is a death sentence and that only vaccination, indeed vaccine mandates, will save us. You have withheld important information from the public and from frontline doctors, and more shockingly, you have intimidated, demonized, and threatened with loss of license doctors who have had the courage to prescribe lifesaving treatment to their patients. What a waste of lives!

What have you done?!

You are now relentlessly pushing experimental vaccines on the general population as 'safe'. Nothing could be further from the truth, as shown by almost 14,000 deaths reported in the US Vaccine Adverse Event Reporting System (VAERS). *Since December of 2020, the number of reported covid vaccine-related deaths are already more than one-and-a-half times the number of deaths reported in conjunction with all other vaccines combined since the implementation of the system in 1990.* Furthermore, there is a lack of long-term safety data. These genetic-based therapies only received emergency interim authorization, and have not undergone the same type of review as fully approved products. You are not providing the public with the information they need to be able to give informed consent.

What have you done?!

You forced family and emergency doctors to abandon their Hippocratic oaths to "first do no harm." You have destroyed the science surrounding COVID and replaced it with baseless behavioural prescriptions. You have divided citizen from citizen, parent from child, brother from sister. Overall, you have participated in destroying a country that was once prosperous, strong and free.

What should you do?

Publicly admit that your recommendations and orders are both harmful and baseless. Retract all of your recommendations and orders immediately. Stop vaccine mandates. Apologize to Canadians and resign.
